

Poultry **ECTO**GON-284[®]

A targeted approach to reducing ectoparasites, using all-natural feed technology

Red mites (and other ectoparasites)

Impacts the life cycle to deter the population

Natural formulation

Reduce antibiotic & chemical use

No withdrawal period

Keep birds in situ

Poultry ECTOGON-284®

A targeted approach to reducing ectoparasites, using all-natural feed technology

Suitable for:

Breeding, Rearing and Laying Hens

Size:

1 kg bottle

Usage:

Continuously for 25 days and thereafter use as required

Benefits of feeding a liquid:

- Easy to administer with low labour costs
- Fast acting within the metabolism of poultry
- Guaranteed intake levels
- Minimises stress through the avoidance of handling

Contains patented PST22 Technology®	Delivers specific compounds which stimulate an adverse reaction in the sensory receptors of parasites resulting in a repellent effect from the host	Helps reduce red mite infestation by breaking the lifecycle through behavioral change causing mites to become less active
Natural non-prescription treatment	Zero withdrawal period, no risk of build-up or resistance	Reduces the need to use chemicals antibiotics
Fed through the water systems	24 hour availability to the hens for continuous protection	Fast acting results can protect the hens at night when mites peak fed
Palatable formulation	Increased water consumption has been shown to help increase appetite and feed conversion	Helping to increase production output to maximise profitability
Sugar-free low pH formulation	Will not cause biofilm build up in the water lines and drinking nipples	Reduce the need to clean lines
Zinc & Methionine	Skin promoting properties	Helps support overall stock health status and appearance reducing unnecessary stress

Dosatron pump settings will vary between 0.03% - 0.04% depending on water consumption under normal conditions. For more precise setting see below;

Water consumption per hen (ml or grams)	140	160	180	200	220	240
Feed rate of Ectogon-284® (mg/hen/day)	50	55	60	65	70	75
% inclusion – Dosatron pump	0.036	0.035	0.034	0.033	0.032	0.031
Amount added to 1000 litre of water (IBC)	360g (300ml)	350g (292ml)	340g (284ml)	330g (275ml)	320g (267ml)	310g (259ml)

Mineral health liquids for poultry drinking water

Minimising stress and supporting health to maximise production profitability
